

Fire door safety information

We hope that you never have a fire where you live, but if it does happen it's really vital to know that fire doors stop the spread of fire and save lives.

Fire doors are typically installed at front entrances, internal communal areas, and service cupboards. They prevent the spread of smoke and fire through the building.

To help keep everyone safe, here's a few steps should take to make sure your fire doors are protecting you:

Make sure that fire doors are kept closed and are never wedged open.

Don't tamper with fire doors or their closers.

If you notice a fire door that doesn't look right, let us know right away.
